

Heat Guard Cage Assembly

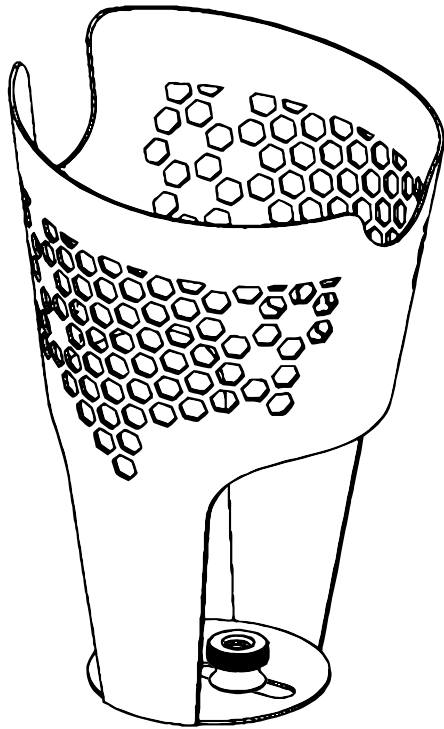

Kit Includes:
1 Cage
1 Flat Bracket
1 Thumb Nut
2 Screws

Please refer to the Go-Coil™ stand instructions for mounting heater, proper use & safety information. Additional copies can be obtained upon request. Please use contact information at back of manual.

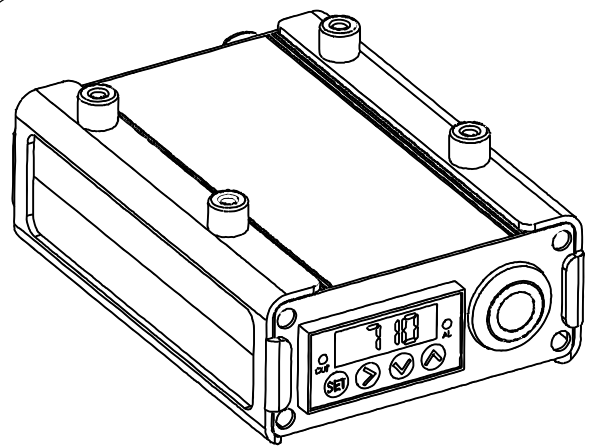

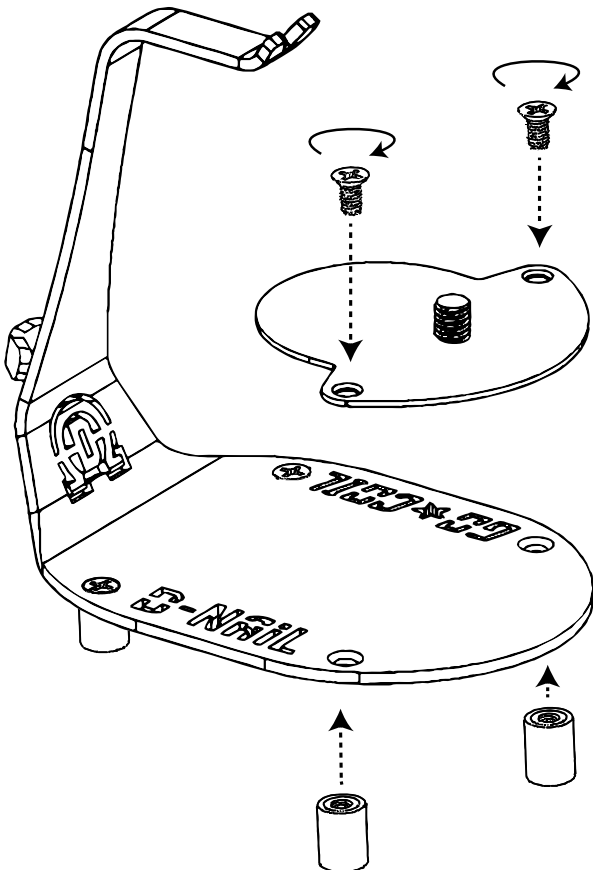

Heater should always be disconnected from power and cool before mounting or dismounting any and all Go-Coil™ parts.

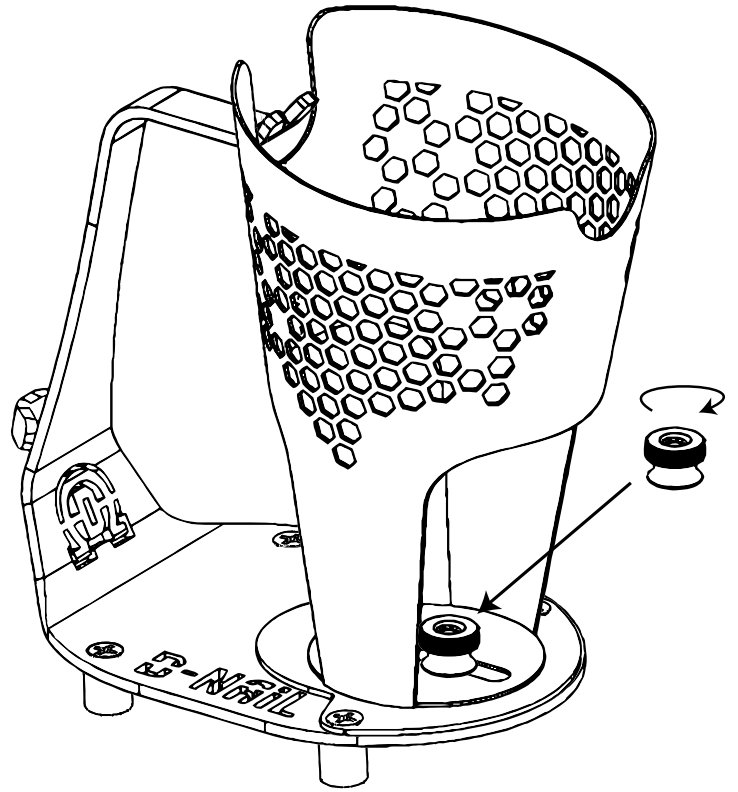

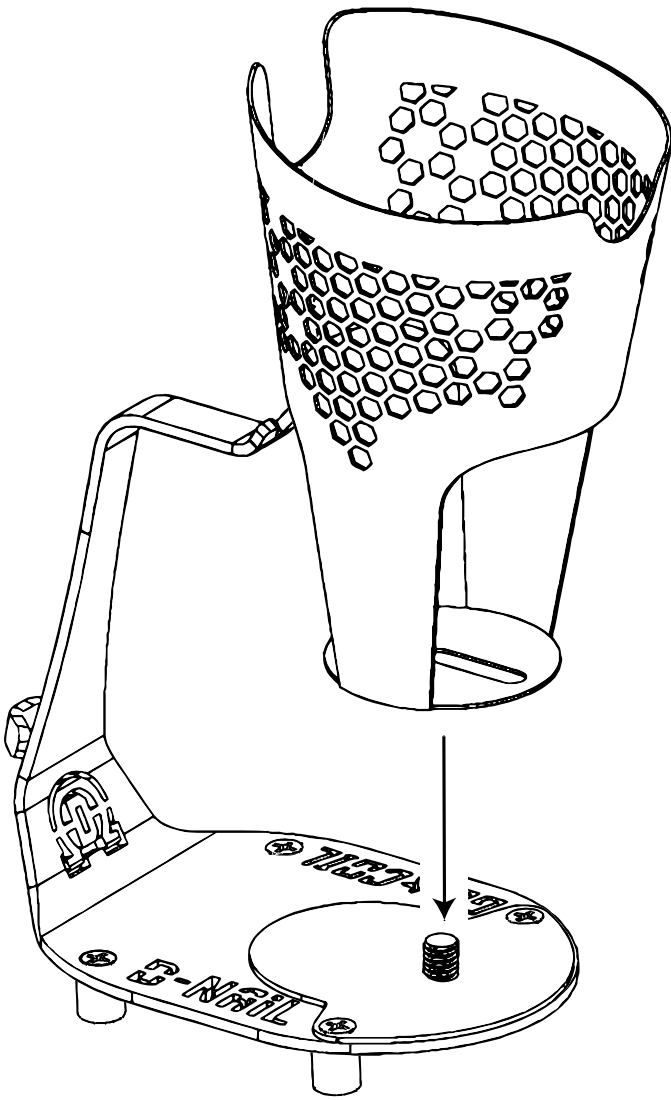

Align both screw holes on flat bracket with front screw holes on stand and loosely fasten included screws into rubber feet before tightening them into their final resting place.

**Optional: Follow the same procedure when using mini mount brackets, omitting the rubber feet.*

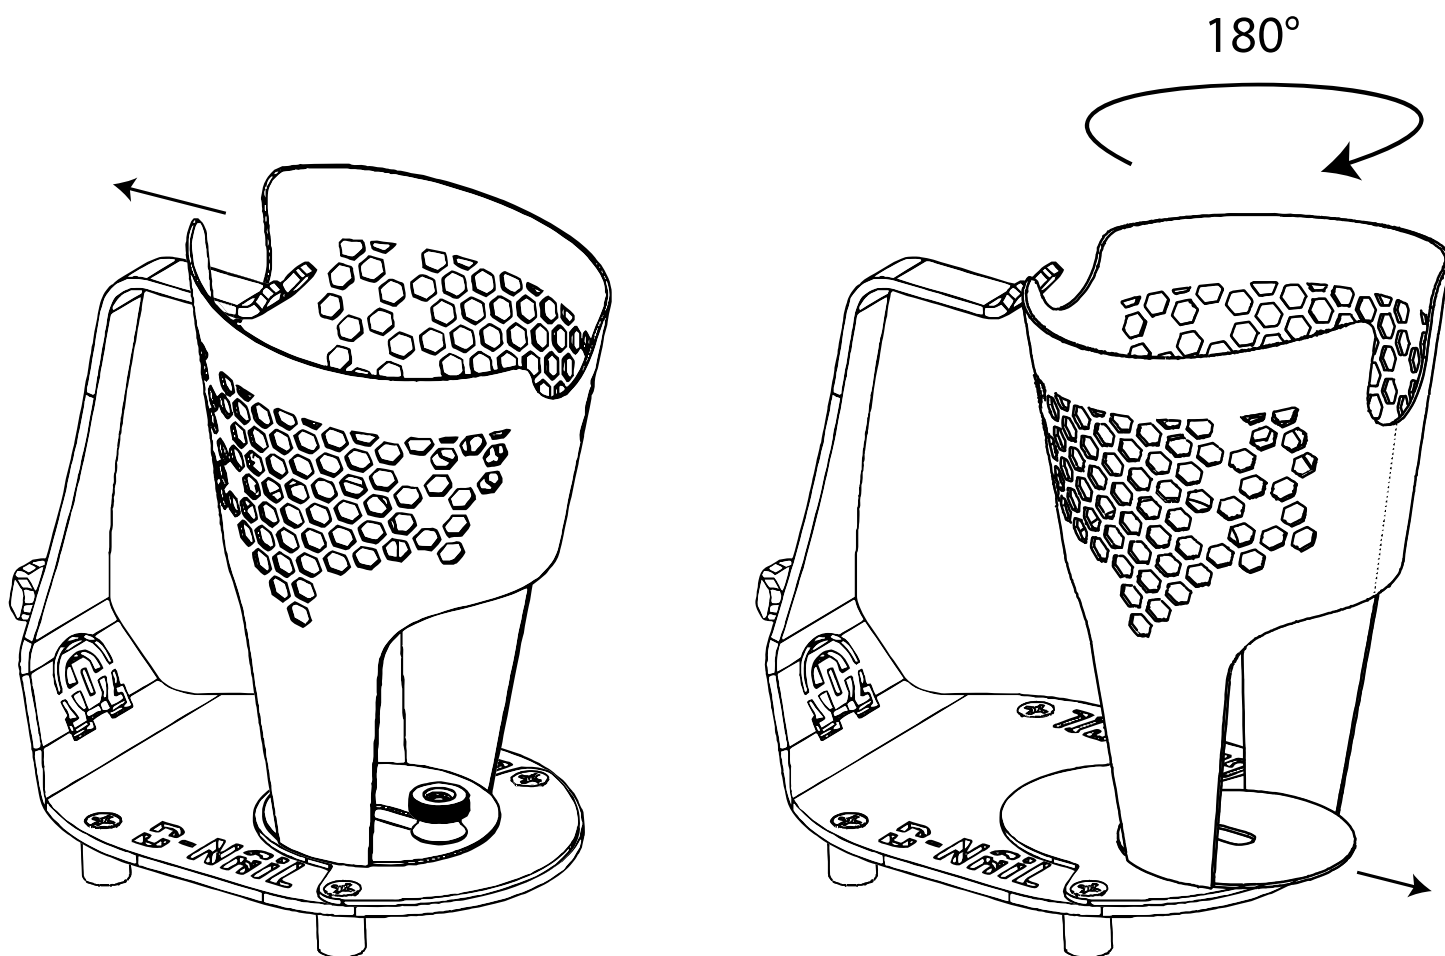

**Optional Mini Mount Brackets*

Align slot on heat guard cage with thread post on flat bracket and loosely fasten thumb nut into place.

After mounting Go-Coil™ heater, position heat guard by sliding cage along thread post and tightening thumb nut. The cage should be evenly centered around heater coil while not making contact with heater coil.

The heat guard cage has two positions shown above. With the addition of the sliding feature this allows for perfect positioning for any heater coil and nail size combination.

Misuse of Go-Coil™ system is extremely dangerous.
If you have any difficulty or questions about Heat Guard Cage assembly or other D-Nail related products please email or message us.
